How many operations can the model chain internally?
(L dependent steps, no CoT; n=30/length)
answers correctly (no CoT)
answer visible in J-lens pre-emission
100%
75%
50%
25%
0%
fraction of chains →
both collapse between
L=2 and 3 (D = 2;
pre-registered 3–7)
example, L=3:
a = 7 − 3
b = a + 5
c = b − 6
what is c?
digit-guess floor
2
3
4
5
6
8
chain length L (sequential single-digit operations)
